Dedicated and efficient full stack developer with over 5 years of experience in application development, mobile development and databases. Works with modern Front-end and Back-end technologies. Throughout my career I've built applications ranging from internal tools like Inventory Management software and company dashboards, B2B applications like service applications to manage work orders and contract workers, to customer-facing applications like e-commerce websites/portals that handle hundreds of thousands of products and customers over various devices and platforms.

US Citizen - Authorized to work in the US for any employer

Work Experience

Senior Full-Stack Engineer / Lead Developer

[Boru, Inc](#) - Chicago, IL

February 2016 to Present

- Mentors and manages a team of 4 developers to code web applications and mobile applications for clients by researching modern design solutions and thoroughly understanding client requirements and specifications to deliver products within budget and ahead of schedule
- Spearheaded company's transition from building PHP web applications into modern Javascript frameworks to efficiently build scalable web applications and mobile applications resulting in 20% increase in sales and 40% increase in client budget due to increase in perceived value of our products.
- Architects and optimizes APIs using various backend technologies like ExpressJS, PHP, Axios and Node.js
- Debugs and improves front-end and back-end code written by Junior developers to increase application performance and decrease time to process requests to increase performance in software that had challenging datasets that decreased client complaints by 30%
- Collaborates interdepartmentally to develop in-house software resulting in a 15% increase in company efficiency
- Estimates and manages software development life cycle of apps that are used by thousands of users and builds and maintains multiple RESTful services for thousands of end-users.
- Develops multiple reusable and modular app templates using modern frameworks like React-Native, Vue, and Angular by understanding design principles and common software needs to drive down cost of development and increase sales by 30%
- Trains the company's app development team using self-written design and development courses and modern DevOps procedures to equip the team with the skills necessary to create and manage web apps and mobile apps efficiently.
- Integrates products with various webs services and technologies offered by Twilio, Ring Central, Google Maps, SmartyStreets, DocuSign, and others to speed up development process and meet clients expectations of efficiency and stability.

Key Achievements at Boru:

- Liaised with the CTO to bring the company's development infrastructure up to date with Agile methodologies and titles and responsibilities to increase performance, developer responsibility and expectations and decrease turnaround time help lead to an increase in company revenue year after year.
- Created and manages Boru's web solutions department, responsible for generation of complete product solutions for mobile and web applications for various clients with thousands of end-users leading to funding company bonuses.
